Q: A Django syncdb runs when I run "python manage.py syncdb", but not when I run "python manage.py test" I'm learning Django and I've installed it on my Windows 8.1 system. The problem I've got is this: when I run the command python manage.py syncdb it starts the Django console, but when I run python manage.py test it says "The list of installed Django apps is empty!" How do I fix this? Thank you. A: The answer was very simple: "python manage.py test" needs to be executed from the same directory as "manage.py". Senator Ron Wyden [D-OR] talks with a student who's technical question about the health law while he holds a stop-gap measure to keep the government open in session on the Senate floor in

Washington on Jan. 25, 2011. (Photo by Ron Sachs-Pool/Getty Images) Here's what's in the draft: Sec. 3571. Availability of certain prior year refundable credits. (a) Funds made available to the Treasury by this section shall be available to pay refunds with respect to premiums or other amounts paid to the Treasury for any tax return due with respect to which a credit provided under this section
